## CreationProcess

### 1 Connect

The first step in my design process for Graphic Design is to connect with you and know what are your needs.

### 2 Define Ideas

We will define your ideas with a design brief, to make clear your objectives with your graphic design project.

### 3 Research

I start the process of Research, collecting useful information, ideas, and inspiration to create a mood board that later will use to develop the design.

### 4 Brainstorming

Once I already have all the information from the mood board ready I start to brainstorm ideas and trying the first raw ideas that later I will develop.

### 5 Development

Once I made the first raw test with design I choose the best options and start developing these ideas into the final design that later will present you.

### 6 Improving Details

The last part of my design process is adjusting details of the graphic design project after your feedback to deliver you the best result.
